Functional Requirements Document

Project Name: Consent and Royalties for AI Training Data

Prepared By: Team 11 [Project 16] → Yassin Fouad (24-101177), Haya Moussa (24-101252), Zyad Walid (24-101301), Yehia Ghanem (24-101122)

Date: 24/10/2026

Version: 1

Introduction

Project Overview:

The project focuses on building a digital platform which lets creators manage AI company usage of their work while they receive payments for content licensing.

The Arab Creators Rights Collective represents creators whose work may include books, articles, photographs, illustrations, voice recordings, and music. Some creators discovered that their work had been used to train AI models without their permission.

The platform serves as a single point of access which allows creators to register their content while selecting authorized uses and providing permission and receiving payments when AI companies use their material.

Functional Requirements

1. **User Registration and Identity Verification**

FR-001: Creator registration

Actor: Creator
Description: The system should allow creators to register by providing their name, payment details, and other required profile information. The system stores the creator’s profile information and links it with the creator’s account.

FR-002: Creator Identity Verification

Actor: System
Description: The system records whether the creator's identity has been verified

2. Work Upload and Ownership Verification

FR-003: Work Upload and Linking

Actor: Creator
Description: The system should allow creators to upload their works or provide links for their existing works. The system should store the work's title, type, language, owner, and fingerprint information

FR-004: Multiple Work and Catalog Registration

Actor: Creator, Publisher
Description: The system should support the registration of multiple works (multiple uploads). The system can link multiple works with their respective owners and publishers.

FR-005: Author Confirmation of Publisher-Registered Works

Actor: Creator, Publisher
Description: The system should require each creator to confirm their works before a publisher's catalog registration is finalized. A publisher-registered work cannot be finalized until the relevant creator has confirmed it.

FR-006: Fingerprint Checking

Actor: System, External Fingerprint Service
Description: The system should check the uploaded works using the external fingerprint service before allowing the upload process to proceed. An upload cannot be processed until the fingerprint check is completed

FR-007: Ownership Match Review

Actor: System, Rights Officer
Description: The system should hold works that match works potentially owned by another person/people and allow the Rights Officer to review them.

FR-008: Ownership Evidence Submission Before Licensing

Actor: System, Rights Officer
Description: The system should provide a process for creators to submit ownership evidence before a work can be licensed.

FR-009: Shared Work Ownership and Consent

Actor: Creators, Rights Officer
Description: The system should support recording ownership information and consent regarding works involving multiple creators.

3. Consent and Permission Management

FR-010: Per-Work and Per-Use Consent

Actor: Creator
Description: The system should allow creators to manage consent independently for each work and for each type of use. The system should ask for consent everytime the creator's work is going to be used. It should not assume automatic consent.

FR-011: Consent Changes and Withdrawals

Actor: Creator
Description: The system should allow creators to change their minds or wiothdraw consent for their works. The system records the consent change or withdrawal and applies the relevant restrictions to future licensing and existing licensees according to the applicable rules.

FR-012: Consent History Retention

Actor: System
Description: The system should maintain a permanent history of consent records and should not delete previous consent records when consent changes or withdraws.

FR-013: Voice Cloning Consent Verification

Actor: System, Creator
Description: The system should require separate signed consent and a recorded video statement before a work can be licensed for voice cloning; until then, voice cloning is blocked

4. Dataset Requests and Licensing

FR-014: Buyer Registration

Actor: AI Company
Description: The system should allow AI companies to register and maintain the company information required for dataset requests and licensing.

FR-015: Catalog Browsing and Filtering

Actor: AI Company
Description: The system should allow AI companies to browse and filter the available

works based on type, language, and permitted use (specified criteria)

FR-016: Dataset Price Calculation

Actor: System
Description: The system should calculate dataset request prices using creator-set prices and dataset size

FR-016: Comparable-Work Price Suggestions

Actor: System, Creator
Description: The system should support suggesting prices based on comparable or similar works to help creators make pricing decisions

FR-017: High-Value Contract Negotiation

Actor: System, AI Company, Legal Team
Description: The system should route dataset requests exceeding EGP 1,000,000 to the Legal Team for contract negotiation before proceeding to the approved licensing process

FR-018: Contract and Payment Recording

Actor: System, AI Company
Description: The system should record licensing contracts and payment records with the relevant dataset request and license

FR-019: Restricted Preview Access

Actor: System, AI Company, Creator
Description: The system should support restricted previews of works when previews are permitted by the relevant creator and watermarks are applied, identifying the buyer to each delivered file

FR-020: Evaluation Agreement Verification

Actor: System, AI Company
Description: The system should require a signed evaluation agreement from the buyer before granting preview access

FR-021: Prohibition on Licensing Works by Minors

Actor: System, AI Company
Description: The system should prevent works created by creators under 18 from being licensed for and AI training; otherwise, licensing is blocked

FR-022: Resumable and Logged Downloads

Actor: System, AI Company
Description: The system should support resumable dataset downloads (resume interrupted downloads) and record download activity

5. Payments and Royalties

FR-023: Royalty Calculation

Actor: System, Finance Team
Description: The system should calculate royalties based on license payments received and buyer usage reports

FR-024: Quarterly Royalty Statements

Actor: System, Finance Team, Creator
Description: The system should generate quarterly royalty statements showing the amount earned by each creator for each work and the payout status

FR-025: Royalty Payout Recording

Actor: System, Finance Team
Description: The system should record creator's royalty payouts and their payment status

FR-026: Holding Royalties During Disputes

Actor: System, Finance Team, Rights Officer
Description: The system should hold royalties associated with disputed works until the relevant ownership dispute is resolved

6. Consent Withdrawal and Removal Confirmation

FR-027: Withdrawal Enforcement

Actor: System, AI Company, Creator
Description: The system should apply consent withdrawal immediately to new licenses and track the 30-day deadline for existing licensees to confirm removal of the affected works from future training sets. New licensing is restricted immediately after withdrawal, and existing licensees are tracked against the applicable 30-day deadline.

FR-028: Buyer Removal Notifications

Actor: System, AI Company
Description: The system should notify affected buyers when consent is withdrawn

and removal action is required

FR-029: Removal Confirmation Tracking

Actor: System, AI Company
Description: The system should record and track buyers' confirmations that withdrawn works have been removed from future training sets

FR-030: Non-Compliance Suspension

Actor: System, Authorized Administrator
Description: The system should support suspension of buyers who fail to confirm removal within the required 30-day period

7. **Misuse Reports and Investigations**

FR-031: Misuse Reporting

Actor: Creator
Description: The system should allow creators to report suspected misuse of their works

FR-032: Misuse Investigation Management

Actor: Rights Officer
Description: The system should allow the Rights Officer to review misuse reports and record investigation information and outcomes

---

Non-Functional Requirements

1. **Security**

NFR-001: Restricted Preview Security

Actor: System, Creator, AI Company **Description:** The system should prevent unauthorized access to restricted previews. Buyers without the required creator permission and signed evaluation agreement cannot access restricted previews.

NFR-002: Secure Dataset Delivery

Actor: AI Company, System
Description: The system should sprotect licensed dataset files against unauthorized access during delivery. Only the authorized buyer can access the relevant dataset delivery

2. Performance

NFR-003: Fingerprint Checking Response Time

Actor: System, External Fingerprint Service
Description: The external fingerprint service should return a match result in approximately five seconds per file

3. Scalability

NFR-004: Expected Platform Scale

Actor: System, Creator
Description: The system should be designed to support the expected first-year scale of 5,000 creators and 2 million works

4. Usability

NFR-005: Arabic User Interface

Actor: Creator, AI Company, System
Description: The platform should provide an Arabic-language user interface

NFR-006: Understandable Legal Information

Actor: System, Creator, Legal System
Description: Legal information presented to creators should use understandable Arabic wording, without relying solely on complex legal terminology

NFR-007: Mobile Readability of Royalty Statements

Actor: Creator, System
Description: Royalty statements should be accessible on mobile devices without needing a desktop computer

5. Capacity and Technical Constraints

NFR-008: Audio File Size Limit

Actor: Creator, System
Description: The system should support audio files up to 100 MB

NFR-009: Image File Size Limit

Actor: Creator, System
Description: The system should support image files up to 30 MB

NFR-010: Large Dataset Download Capacity

Actor: System, AI Company
Description: The system should support dataset downloads up to 1 TB

Business Rules

BR-001: Consent Required
A work should not be licensed for AI training or other AI-related uses unless the creator has explicitly granted consent.

BR-002: Consent per Work and Use
Creators should provide consent separately for each work and each permitted use

BR-003: Additional Consent for Voice Cloning
Voice cloning should require separate signed consent and a recorded video statement from the creator.

BR-004: Existing Licenses After Withdrawal
Existing licensees should be required to confirm removal of the withdrawn work from future training sets within 30 days.

BR-005: Consent History
Consent records should be kept permanently. Previous consent records should not be deleted when consent changes or is withdrawn.

BR-006: Ownership Verification
Works that match content owned by another person shall be held for review by the Rights Officer before licensing.

BR-007: Fingerprint Check Before Licensing
A work should not proceed to licensing until its required fingerprint check has been completed.

BR-008: Publisher-Registered Works
Works registered through a publisher must require confirmation from the relevant author.

BR-009: Licensing of Minors' Works
Works belonging to members under 18 years of age should not be licensed for AI training.

BR-010: High-Value Requests
Dataset requests exceeding EGP 1,000,000 shall be referred to the Legal Team for

contract negotiation.

BR-011: Evaluation Agreement
A signed evaluation agreement shall be required before a buyer can access work previews for evaluation.

BR-012: Creator Permission for Previews
Work previews shall only be made available when the creator permits them

BR-013: Royalty Distribution
The Collective shall retain 15% of royalties, with the remaining share allocated to creators

BR-014: Royalty Schedule
Royalties shall be calculated and paid quarterly.

BR-015: Royalty Currency
Creator payments shall be made in Egyptian pounds (EGP) for creators in Egypt and US dollars (USD) for creators abroad.

BR-016: Disputed Ownership and Royalties
Royalties associated with works under ownership dispute shall be held until the dispute is resolved.

BR-017: Removal Confirmation Deadline
Buyers shall provide removal confirmation within 30 days of a consent withdrawal affecting an existing license.

BR-018: Failure to Confirm Removal
Buyers who fail to provide the required removal confirmation within 30 days should be subject to suspension
