Elicitation Techniques Document

Project Name: Consent and Royalties for AI Training Data

Prepared By: Team 11 [Project 16] → Yassin Fouad (24-101177), Haya Moussa (24-101252), Zyad Walid (24-101301), Yehia Ghanem (24-101122)

Date: 24/10/2026

Version: 1

Introduction

Project Overview:

The project focuses on building a digital platform which lets creators manage AI company usage of their work while they receive payments for content licensing.

The Arab Creators Rights Collective represents creators whose work may include books, articles, photographs, illustrations, voice recordings, and music. Some creators discovered that their work had been used to train AI models without their permission.

The platform serves as a single point of access which allows creators to register their content while selecting authorized uses and providing permission and receiving payments when AI companies use their material.

Requirements Elicitation Methods

1. **Interviews →** Because different stakeholders have different responsibilities and priorities, one-to-one interviews help you understand more what every person truly needs

2. **Document Analysis →** this project relies on several key foundational documents (Project Request, Membership and Licensing Rules, Platform Technical

Notes, buyer emails, and the incident report). These documents provide requirements without needing to arrange additional meetings

3. **Focus Groups ➔** it brought several creators together to discuss their experiences and expectations. It revealed shared concerns (consent, withdrawal, and transparency) and different needs (bulk-importing, Arabic-language support, and price suggestions). It also has been already revealed from the documents that a focus group has been conducted

4. **Questionnaire ➔** it allows the team to gather feedback from a large number of creators and since the platform serves diverse users, a questionnaire can help identify common needs and individual preferences
